

# ISO 14001:2015 Services

EHS Management Strategies, LLC has developed a number of services to assist companies update their environmental management systems. Depending on the resources and expertise available within your organization one or more of the programs of some value.

## ISO 14001:2015 Readiness Review and Coaching

For companies upgrading their environmental management system (EMS) to the new ISO 14001:2015 we have developed the *1-day ISO 14001:2015 readiness review*. We will visit your location and review your programs with a focus on the new requirements. We will also *engage key members of your management team* to prepared them for the registration audit. We will review the following processes:

- Defined scope – considering the context, intended outcomes and interested parties.
- Degree of management engagement and leadership.
- Identification of aspects, risks, and opportunities from a life cycle perspective.
- Continual improvement process including the establishment of objectives.
- Operational controls – management of change, outsourced services, design, and procurement.
- EMS performance measurement and analysis.
- Management review process.

We will begin the day with an opening meeting with the management team. This will include a brief overview of ISO 14001:2015 and key changes and brief interviews. We will also interview the plant manager, quality manager, purchasing manager, and engineering manager during this process. These interviews will assess your conformance to the new requirements and prepare them for the registration audit.

Prior to our arrival, we will review key EMS documentation including your EMS scope, policy, aspects process, and performance metrics. After the audit we will present the findings to management. Any identified nonconformance's will be documented and this may be considered part of your internal audit process.

## The ISO 14001:2015 Kick-Start

This 2-day program is for organizations who need to upgrade their EMS process to meet ISO 14001:2015 requirements. This will be a combination of training, gap assessment, and implementation planning. We will meet with key EMS personnel to review the new standard and your existing EMS program to determine changes needed. We will review your quality program to determine possible areas of integration. On day 2 we will update your aspects process to include a Life Cycle Perspective and review how risks are identified and documented.

The output from this program will be an EMS team with a good understanding the ISO 14001:2015 standard (training certificates provided), detailed understanding of action items needed to complete upgrade (resources & timing), and an updated aspects process from a life cycle perspective.
